

Eco Iguassu. Adventure

BLACK WHEEL TRACK

3 miles track

Definitely the most everlasting nature related activity inside of the Iguaçu National Park – Brazil.

The tour begins with a short hike in trail above ground for about 320 meters.

After the trail above ground one can choose to do the 9 kilometers (3 miles) on foot, bike or vehicle.

If You decide to do the whole 3 miles on foot and get tired on the way, no problem your Trail Guide can call the wagon and You do the rest on a vehicle.

The whole tour is guided by English-speaking trail guides who make explanations about local fauna and flora.

The contact to nature on this tour is really amazing since You can count on an expert who besides showing the way, gives explanations about the ecossistem of the lush sub-tropical rainforest of Iguassu.

Sightseeing

Suspension bridge on the way over a tributary of the Iguassu River.

Wild life Observation Tower, view to a lake with birds and caymans.

The adventure continuous on a boat ride over the upper part of the Iguassu River.

Finally a Kayak ride for about 5 kilometers downstream.

Capybaras live in the ground but are always near by water. Besides refreshing themselves they use rivers as a escape from predators like jaguars.

Caymans are often seen around this tour, You do not have to worry about them, once they spot us they just swim away.

Capuchin Monkeys are day-light mamals who may show up during this tour. Always in big groups up to 20/25 individuals, so if You spot one, wait a few minutes because the rest will be around.

Many surprises along the way. Ever wondered on how rivers start? A couple of small springs make the track even more fascinating.
